EXPERIENCE

Associate Data Scientist, Eversource Energy, MA **June 2024 - Present**

Drone Line Inspection Data Pipeline

- Independently designed an end-to-end data pipeline for transmission line inspections done by Eversource's drone team, consolidating unorganized image and inspection data into a centralized SQL database.
- Significantly improved active operational time by automating various tasks through TypeScript and python scripting, saving an estimated $1.2 million in labor hours over 3 years.
- Functioned as the key manager of large quantities of data between multiple internal and external teams, creating a streamlined data exchange and improving vendor process reliability.
- Managed multiple customized reports and dashboards on drone data throughout multiple internal teams.

AMI-Based Distribution Transformer Health Monitoring

- Built ETL pipelines using Databricks to aggregate downstream customer load using AMI interval data.
- Backed team in developing early overload detection and connectivity validation across 100k+ transformers.
- Scaled detection to identify multiple device overloads by cross-referencing AMI data with SCADA and GIS data.
- Conducted research into different ways to intake/analyze large volumes of data associated with smart metering.

Transmission System Planning Interface Stress Automation

- Parsed static case data from ISO New England studies to automate interface stressing through custom algorithms.
- Assisted in successfully completing rule-based automation covering 25% of interfaces, saving $431k in labor hours.
- Led data validation effort of Power Transfer Distribution Factors extracted from case data in order to produce weighting inputs for optimizing interface stressing through algorithmic automation.

Data Analyst Intern, Main Street Bank, MA **Dec. 2022 – Feb. 2024**

- Analyzed bank-wide, core reports in preparation for a large internal-system conversion and led the initiative on improved reporting for streamlined decision making among branch managers and C-Suite executives

PROJECTS

NVIDIA Interactive Qualifying Project

- Worked with two teams of 4 to design, implement, and test an FPS video game environment with the aim of testing the effects of latency compensation techniques on player experience.
- Managed the collection of in-game data and round-based questionnaire data through SQL to create multiple data visualizations that were analyzed in a report published by WPI in collaboration with NVIDIA.

Kickstarter Clone

- Developed a clone website of Kickstarter using React.js and Amazon Web Services, with a focus on scalability.
- Implemented a MySQL database using Amazon RDS to manage the backend of the website, allowing for efficient and reliable data storage.
- Developed serverless Lambda functions to handle API calls to the database, allowing for flexible and scalable backend functionality.

SKILLS

Programming Languages: Python, C, JavaScript, TypeScript, HTML, CSS, SQL, R, Java
Tools & Frameworks: Databricks, PSS/E, SCADA, Flask, React.js, d3.js, Node.js, Git, AWS, Azure ML, Jira

EDUCATION

Worcester Polytechnic Institute **March 2024**

Bachelor of Science in Data Science, Minor in Business, GPA 3.75/4.00
